

Company Fact Sheet

Copperworks Distilling Company is a distillery, tasting room, and retail store located on the waterfront in downtown Seattle, Washington. The company produces small-batch American Single Malt Whiskey, a series of gins, and vodka, all from malted barley. The spirits are distilled in traditional copper stills that were specifically designed for Copperworks and for the distillation of each individual spirit.

Copperworks was founded by co-owners/distillers Jason Parker and Micah Nutt—both experienced craft beer makers, who built Copperworks to explore the possibilities of malted barley by distilling high-quality craft beer (without hops) into fine spirits.

Copperworks opened its doors in 2013 offering tastings, tours, and other events focused on enjoying and learning about fine distilled spirits. The company has won numerous local, national and international awards. Copperworks spirits can be found on the shelves of bars, restaurants, and retail stores through Washington State.

Leadership Copperworks was founded by co-owners/distillers Jason Parker and Micah Nutt. Jason has extensive professional experience in the brewing industry, starting as the first brewer for Pike Place Brewing (now Pike Brewing Company), working at Redhook, and ultimately working as Brewmaster for Pyramid Breweries. Micah is an experienced and creative home brewer.

Product Line Copperworks spirits are made from a high-quality, un-hopped craft beer brewed from malted barley and distilled in traditional copper stills.

- **Copperworks American Single Malt Whiskey:** made from 100% malted barley and distilled in traditional copper pot stills. Initial releases were matured for no less than 30 months in full-size charred, new American Oak barrels. Later releases are exploring the flavors of previously used casks.
- **Copperworks Gin:** offers a distinctive, well-balanced combination of juniper and nine other botanicals, with aromatic citrus, coriander and floral top notes.
- **Copperworks New Oak Cask Finished Gin:** aged for over three months in charred, new American Oak barrels. Aging has softened the juniper and added aromas and flavors of cinnamon and toasted orange.
- **Copperworks Vodka:** made from malted barley and unfiltered; presents a subtle and distinctive barley essence with a smooth, round mouth feel and naturally occurring notes of vanilla.

Limited Edition Products	Copperworks finishes Copperworks Gin in oak barrels with various past lives and releases the limited-edition cask finished gins when they've reached their peak flavor. Past expressions have included gin finished in barrels previously containing malt whiskey, rum, mezcal, port , sherry, tonic, and many more.
Ingredients	Copperworks' spirits are distilled from a premium craft beer (without hops) made from malted barley. Malted barley is the most expensive ingredient to base spirits on, but we believe it produces the most flavorful, high-quality spirits. We use a pure strain of fresh brewer's yeast in our fermentation—a strain we have selected for its distinctive flavor profile and that is unique to our products.
Distinctive Processes	Our entire fermentation and distilling process is focused on producing the finest flavors, aromas, and textures in our spirits. In all our products, we take the unusual step of starting with the highest quality beer that has been boiled in its early stages to achieve the maximum level of purification. And unlike most distillers in the U.S., we distill our whiskey two times, using two pot stills manufactured for us in Scotland.
Capacity	Our large stills enable us to draw the best-tasting portion of the distillation (the "hearts") with precision—allowing us to control our flavors and produce more consistent spirits from batch to batch. With more than 10,000 pounds of copper stills, representing 1,800 gallons of capacity, Copperworks can produce up to 350,000 bottles of spirits per year.
